Art Unit: 1714

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 rejected under 35 U.S.C. 103(a) as being unpatentable over Okada et al in view of Ardrizzi et al and Nakamura et al.

Okada et al disclose rubber compositions suitable for tire applications comprising diene rubber, process oil, factice and additives typical of tire applications such as carbon black and silica. This reference lacks an explicit recitations of the use of factice and process oil in combination, the use of carbon black and silica in combination or the use of low PCA process oils.

The reference to Ardrizzi et al teaches the low toxicity benefit of the use of low PCA process oils in diene rubber compositions.

The reference to Nakamura et al teaches several benefits flowing from the use of carbon black and silica in combination with silane coupling agents in tire applications.

Regarding the limitation to the use of factice and process oil in combination, the recitation by the primary reference of these two species as equivalent for softening purposes renders obvious their use in combination.

Nothing unobvious or unexpected is seen to occur from applicants combination of ingredients.
